Tips:

ATL HD 9 ultrasound system provides the outstanding image quality required in OB/GYN practices, as well as the versatility to meet the needs of all women's health applications.

Clinical performance supports a confident diagnosis

The 3D and 4D capabilities of the HD 9 are easy to learn, making it an ideal system for those just beginning 3D and 4D imaging, as well as those who appreciate this combination of simplicity and sophistication. The HD 9 also delivers tools that

help you take advantage of the full value of volume data to guide patient care:

Live iSlice, which creates slices of a volume rendering to zero in on the region of interest

Breast elastography, which offers a way to characterize tissue by differentiating areas of relative stiffness, increasing the information available for diagnostic decisions

Trimester-optimized Spatio-Temporal Image Correlation (STIC), which aids in evaluating fetal heart anatomy and function

Tissue Specific Imaging (TSI) optimizes the system for the specific transducer and exam type, resulting in excellent image quality with little need for time-wasting adjustments

System highlights:

Outstanding clinical performance to support confident diagnoses

Extremely versatile with easy-to-use 3D/4D capability

Designed for optimal workflow and reliability in today's busy practices

Access to ATL award-winning customer service and Remote Services Network
